

DUCTING SYSTEMS BY ARROWHEAD PRODUCTS

For more than 60 years, Arrowhead Products has led the industry in the manufacture of aerospace ducting systems and propulsion lines.

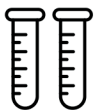

Arrowhead Products specializes in metallic ducting in major high pressure ducting applications and lightweight elastomeric and composite component designs for rigid, semi-rigid and flexible ducts.

METALLIC PRODUCTS

- Metallic system capabilities include materials (CRES, Inconel, Titanium), tube bending, precision forming, machining (CNC, laser, water, jet), and assembly (TIG, resistant welding)
- Metallic products boast superb thermal performance, high flexibility and mitigate weight

COMPOSITE PRODUCTS

- Designed to incorporate reinforcing fabrics coated with either elastomers or thermosetting resins that are cured to shape
- Flexible and semi-rigid composite design available
- Composite products have high flame resistance, low heat emissivity, superb thermal performance, high flexibility and ultra-lightweight
- Flexible foam in composite muffler ducts reduce noise in high-temperature environments

SOLE SOURCE WORLDWIDE DISTRIBUTOR

CAGE CODE | 70628

METALLIC & COMPOSITE DUCTING SYSTEMS

Exhaust Systems & Components
Insulated Products
Rigid Composites
Ultra-Lightweight Ducting
Metallic Ducting
Composites
Flexible Joints

APPLICABILITY

F-5	CH-47
F-15	P-3
F-16	UH-60
F-18	T-50
C-130
